Osteoarthritis is a disease which involves the wearing away of the normal smooth joint surfaces. This results in bone-on-bone contact, producing pain and stiffness. Even though there is no cure for arthritis, treatments like knee replacement allow patients to enjoy their lives with less pain and better mobility.

The Potential Benefits of Knee Replacement Surgery

- Relieve pain
- Improve mobility
- More freedom to pursue everyday activities, such as walking or climbing stairs

Only an orthopedic surgeon can determine if knee replacement is required based on an individual patient's condition. The performance of knee replacements depends on age, weight, activity level and other factors. There are potential risks and recovery takes time. People with conditions limiting rehabilitation should not have knee replacement surgery.
