Part of an innovative portfolio
designed for hernia repair from Ethicon

• High burst strength and tensile strength for a strong repair\textsuperscript{1,2,3,*}
  - Constructed of the same polypropylene monofilaments as PROLENE\textsuperscript{®} Polypropylene Suture that retain strength indefinitely in clinical use\textsuperscript{4}
• Customizable – may be trimmed without unraveling\textsuperscript{4}

\textit{A tension-free repair should provide strength for the long term}

\*Shown in preclinical studies
### Core Mesh Material
PROLENE® Polypropylene Mesh

### Tissue Separating Barrier
None

### Pore Size
< 1 mm²

### Weight
> 95 g/m²

### Customizable
Yes

### Fixation Requirement
It is recommended that nonabsorbable sutures be placed 8.5 mm to 12.5 mm (1/4" to 1/2") apart at a distance approximately 6.5 mm (1/4") from edge of the mesh. Some surgeons prefer to suture an uncut section of mesh that is considerably larger than the defect into position over the wound. The opposite sides are then sutured to assure proper closure under correct tension. When the margin sutures have all been placed, the extra mesh is trimmed away.

### Shelf Life
5 years

---
