SATURATED: BIOPATCH® can absorb 8 times its weight in fluid. In this case, foam has become saturated. BIOPATCH Disk should be changed.

LINE INSERTION: Leave a minimum of 1.25cm of catheter to allow for proper cleaning and to apply BIOPATCH Disk.

CLEANING: Prepare site with antiseptic and wait until the skin is completely dry.

APPLICATION of BIOPATCH DISK: Apply BIOPATCH Disk printed side up with edges of radial slit approximated and aligned with catheter tubing. Do not peel printed side from BIOPATCH Disk.

DRESSING: Ensure BIOPATCH Disk has 360° contact with skin around catheter. Cover with transparent film dressing.

REMOVAL: When slit is aligned correctly, BIOPATCH Disk will remain attached to the transparent film dressing and removal will be simultaneous.

BIOPATCH Disk Applications
- Central Venous Catheters
- Dialysis Catheters
- Arterial Catheters
- PICC Lines
- Peripheral IVs
- Epidural Catheters
- Implanted Venous Ports
- Drains

Tips & Troubleshooting
- **UPSIDE DOWN:** The white side of BIOPATCH® must face down. BIOPATCH Disk should be changed.
- **SATURATED:** BIOPATCH® can absorb 8 times its weight in fluid. In this case, foam has become saturated. BIOPATCH Disk should be changed.
- **ON TOP OF LINE:** Ensure 360° contact with skin around catheter. Contact your BIOPATCH Disk representative for additional education.
- **SLIT NOT APPROXIMATED:** Edges of radial slit should approximate to maximize efficacy. Contact your BIOPATCH Disk representative for additional education.
