GENERAL LUBRICATION INSTRUCTIONS
For battery-driven power equipment

**Small Battery Drive, Trauma Recon System and Battery Power Line**

Use only DePuy Synthes Power Tools Autoclavable Oil (519.97). Oil drive units/handpieces, battery casings and lids, and attachments after every use. Lubrication should be performed after cleaning and before sterilization.

Apply 1 drop of oil to all accessible moving parts of the drive unit/handpiece, battery casings and lids, and attachments. Distribute the oil by moving the components. Wipe off excess oil with a cloth.

**Notes:** Attachments and accessories may only be lubricated with DePuy Synthes Power Tools Autoclavable Oil. The composition of the vapor-permeable oil is optimized for the specific requirements of the power system. Lubricants with other compositions can cause jamming, have a toxic effect, or have a negative impact on the sterilization results.

To ensure a long service life and to reduce repairs, always lubricate the drive units/handpieces, battery casings and lids, and attachments after each use.

**Drive Units/Handpieces**

**Battery Casings and Lids**

Do not lubricate power module (05.001.202).

**Attachments**

Do not lubricate the Radiolucent Drive (511.30).

Only lubricate the drive units/handpieces, battery casings and lids, and attachments when they are clean.

DePuy Synthes Power Tools recommends running the drive unit/handpiece with lubricated attachments after cleaning and before sterilization.

1 = 1 Drop
